ADVANTAGES OF ALL ROVER SYSTEMS

One Battery System

ONLY ONE battery is needed to power all the system's components, saving cost on buying and changing out additional camera batteries.

Lithium Ion battery

Lasts Complete Game (6hrs)

Other systems require 2-4 different batteries that need to be charged *and* maintained. Missing a battery means you miss the action! Less maintenance with our one battery system.

Rain Gear
3 pc - Monitor controller & camera

Industrial Strain Reliefs

All Rovers come with custom strain reliefs to avoid stress on camera ports and cable damage. Our systems help you **SAVE** on cables and/or cameras, saving you more money.

Camera firmly secures to mast **Cables move with Camcorder**

NO VELCRO!

Protected Monitors

All Systems have HDMI Out for Replay or Live Streaming, compatible with HUDL and other replay systems.

Rover Systems can be setup and taken down within 7 minutes.

The Rover Systems have protection for your monitor against impacts and harsh weather.

Add the Air Potato System at anytime to control Record on/off from the sideline camera system.

Control and LED Indicator

All controls can be done with one hand. (Record, On/Off, Zoom, Pan and Tilt.)

Any camera operator can use it with ease.

LED Indicator For Record
Know when recording/ not recording

ADVANTAGES OF ALL ROVER SYSTEMS

DUAL PURPOSE

ALL Rover Systems, Tripod, Hitch and Mobile can be transformed into a Monopod System in seconds.

Two tools in one, SAVE DOLLARS!

Compatibility

All Rover Systems are compatible with the most commonly used formats and video editing systems, including Hudl and are Replay Ready.

The Tripod Rover System offers an extra wide base that distributes the weight of the system evenly to the three legs. This provides more stability compared to the weight on the center mast.

Stable Extra Wide Base

Weight Distributed on Ends of Legs for Stability

Manual Tilt

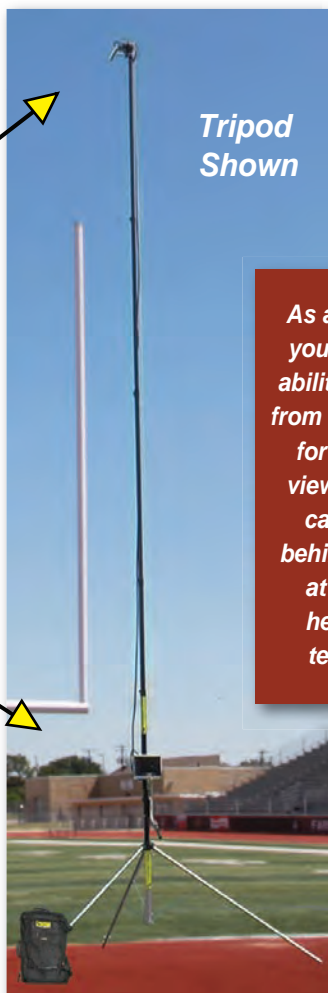

Better Control so you DON'T MISS THE ACTION

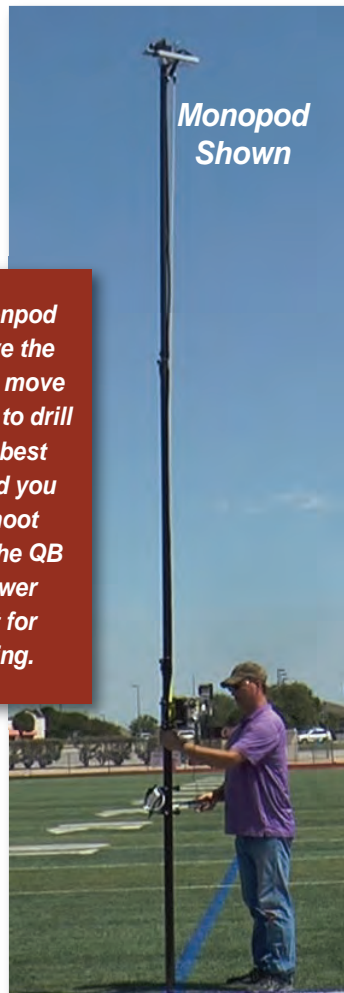

Protection for camera saves you money

Manual tilt allows for very responsive movement and better reliability. Slower motorized tilt units can miss some of the action.

Tripod Shown

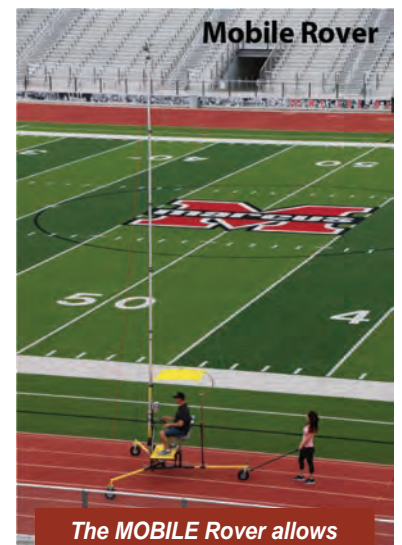

Monopod Shown

As a Monopod you have the ability to move from drill to drill for the best view and you can shoot behind the QB at a lower height for teaching.

Rover Hitch

Mobile Rover

The MOBILE Rover allows easy travel from field to field, without wasting crucial time. This lightweight Rover moves scrimmage to scrimmage with ease.

WHICH SYSTEM IS BEST FOR YOU

Elite

All Accessories Included

MOBILE ROVER Telescoping System - 28 ft & 33 ft Systems Available

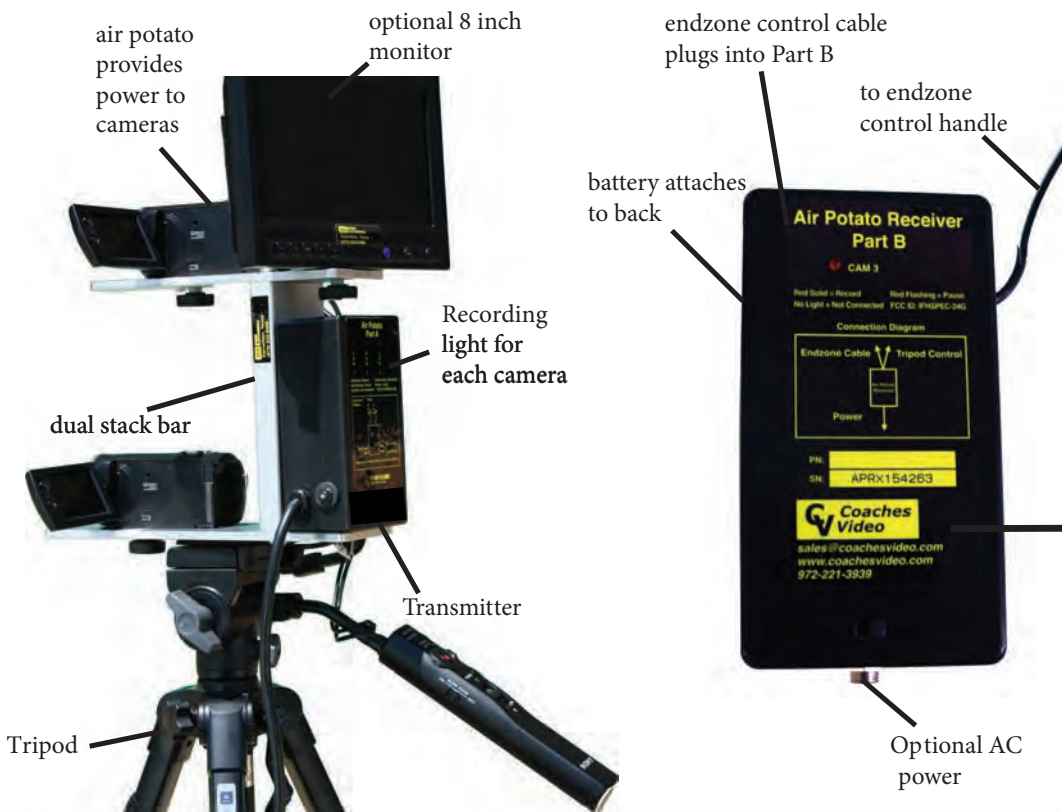

- Pull Mobile Rover to practice with Truck, Gator or Golf Cart (20 mph max)
- Move fully extended to the viewing area
- Keep on line of scrimmage for team drills
- Quick and easy setup and takedown, less than 15 min.

AIR POTATO CAMERA SYSTEMS

- Line and Secondary/ Receiver/ QB views made easy with Air Potato System.
- Remote control (on/off) of your endzone camera from the sideline.
- Synchronize your endzone camera to your sideline cameras to save time.
- Take the recording responsibility out of the cameraman's hands.
- Save time by downloading the same number of clips as the sideline cameras.
- Matching angles made easy and saves time.
- Integrated with most endzone systems.
- Sideline wide, tight, and endzone recording with one button press.
- Works with all popular editing, replay or streaming systems.

Endzone System

COACH POTATO SIDELINE CAMERA SYSTEM

- Trigger your wide and tight sideline angles at the same time.
- You only have to use one camera person to trigger two angles for different coaches.
- This insures you have the same number of clips for both angles, saving you time.
- Zoom function on one camera, record on both.
- An optional 8 inch monitor is available to Improve your video and make it easier for the camera operator.
- Sturdy dual stack bar for mounting both cameras and optional field monitor.
- Works with all popular editing, replay or streaming systems.
- 2 Monitor / 2 Zoom systems available.
