

DBX Dual Band Headsets

900 Mhz or 2.4Gz

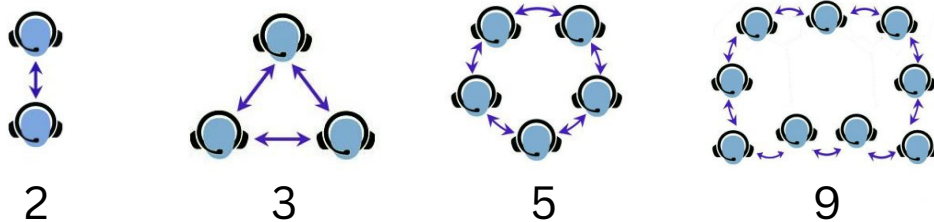

The Coaches Video DBX is a ground-breaking football wireless headset system that includes Dual RF Bands. With the DBX system coaches have the ability to select either 900 Mhz or 2.4Ghz, the two most effective digital channels available today. With two distinct radio bands and frequency hopping technology Porta Phone's DBX is an industry game changer to provide your staff with crystal clear operation

DBX headsets also feature a wireless protocol known as Frequency Hopping to insure crystal clear communication. From the instant they are powered up DBX scan the air and automatically select or "Hop" to clear channels whenever necessary to easily avoid interference. Frequency Hopping is a wireless technique utilized by the US Armed forces to dodge or evade other wireless systems and is standard on all Coaches Video DBX systems.

Several Configurations to meet your needs

Single Channel

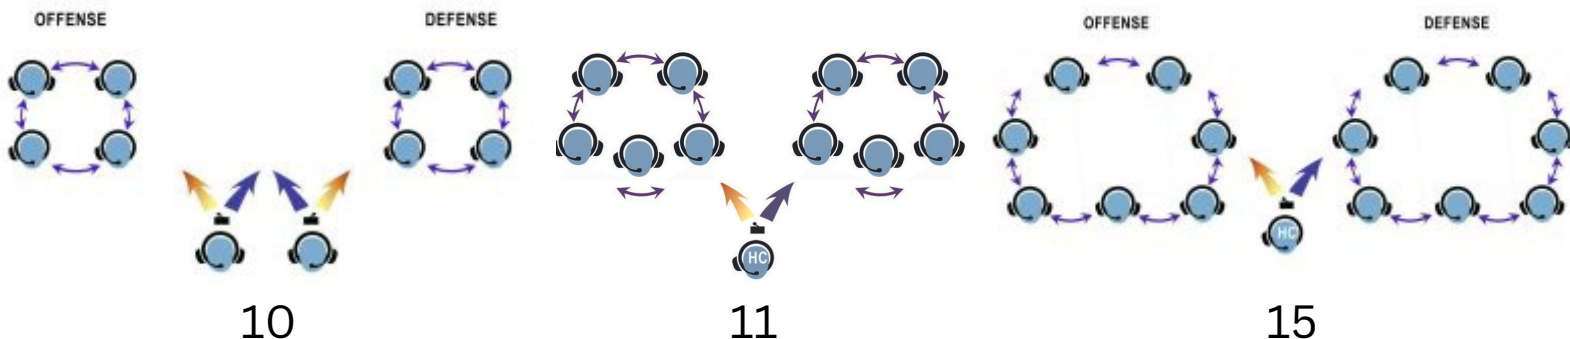

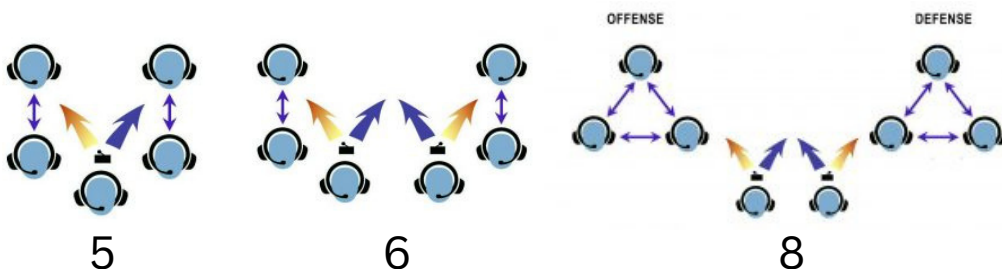

2-9 Coaches
